

Curriculum of studies – supplementary information and explanations for medicine students

In the academic year 2016/2017 our new study program will be implemented on the 5th year (current 5th year description is in separate pdf document; not in 2015/2016 curriculum!) and it may result in limited possibilities to accept students for selected courses, especially on the 4th, 5th, 6th year. Few clinics/departments must organize double amount of courses for our home students (new and old study ones). For these reason we cannot accept students for OPHTHALMOLOGY and ONCOLOGY. We also do not recommend you to take following subjects: Anesthesiology, Gynecology and Obstetrics, Otolaryngology, Forensic medicine, Orthopedics and Traumatology.

Additional explanations for our curriculum:

➤ **General Surgery 4th year:**

winter: propaedeutic of surgery, general surgery and gastrointestinal surgery

summer: general, vascular and gastrointestinal surgery

Summer or/and winter must be taken in totality

- **Internal diseases 4th year:** pulmonology, nephrology, angiology, gastroenterology
- **Pediatrics 4th year:** nephrology, gastroenterology, hematology, pulmonology, allergology
- **Gynecology and Obstetrics 4th year:** gynecological and obstetrical examinations, normal delivery management
- **Infectious diseases course** consists of 2 semester of classes: winter (2nd part) and summer (1st part, on 4th and 3rd year respectively). **The same situation applies Infectious and parasitic childhood diseases.**
- Many other courses consist of 2 semesters program: winter (1st part) and summer (2nd part). *To obtain whole year ECTS student must complete whole year program (winter + summer).*
- **General Surgery 5th year:** general and oncological surgery, cardiosurgery, thoracosurgery, gastrointestinal surgery
- **Internal diseases 5th year:** cardiology, endocrinology, hematology, occupational diseases, rheumatology
- **Pediatrics 5th year:** cardiology, endocrinology, hematology-oncology
- **Psychiatry :** only one semester program (3 ECTS) is available for Erasmus+ students

- **Gynecology and Obstetrics 5th and 6th year:** gynecological and obstetrical pathology – diagnostics and treatment) – only for advanced students
- **6th year courses are here in block system (whole week the same classes) and 1-5th year courses are in “once a week system”.** If you decide to take 6th year course it will give overlapping with 1st-5th year ones. It is recommended to take the majority of courses from the same year level to avoid overlapping.
- **Optional courses might be available. However, there is a certain number of students required to form the group.**

CLINICAL ROTATIONS are only for internship students.

PSYCHIATRY is **not possible** here as internship, next year **OPHTHALMOLOGY** will be also **not possible** (implementation of new study program means double amount of regular students). The only rotations easy to fix is **surgery** and **internal diseases** but not in so detailed department reservation way. For **PEDIATRICS** and **GYNECOLOGY** we must incorporate clinical rotation students into regular English Division classes as rotation substitute. **Primary Health Care, Emergency** or **Family Medicine:** is **not possible** to fix here - we have not clinical hospital department for this rotation. In conclusion: we have not in our current curriculum clinical rotation program and after completing incoming students applications/proposals we must negotiate with doctors how to fix this rotations. It is “road map”: some small clinics have so many regular English Division students that they cannot accept any rotation student.
